

PRODUCT CATALOG

The Costaluz product line has been developed to meet the needs of coastal outdoor areas, while also delivering elegant designs at an affordable price. We recognize that most luminaires cannot reliably withstand these difficult environments, where the salt air can quickly age the appearance.

GLASS:

The designs illustrated in this catalog are achieved through the use of European molded blown glass, handcrafted utilizing centuries-old techniques passed from one generation to generation. Once blown into the desired shape, the glass is then hand decorated in any of a variety of finishes to complete the effect. This use of glass allows us to interpret both contemporary and traditional styles in such diversity.

BRACKETS:

The brackets and post fitters for the blown glass diffusers and globes are constructed of powder coated, cast aluminum. This finish is very durable and is a perfect compliment to characteristics of the glass. Stamped stainless steel fitter pans are used for our flush wall mount luminaires. Stainless steel "set screws" and other parts are utilized to retain the glass and are corrosion resistant.

FINISHES:

Costaluz fixtures are available in white, black or bronze finishes. The decoration of the glass diffusers and globes is hand applied by skilled craftsmen, then fired to ensure a durable and lasting finish. The result is a finish that will not tarnish, peel or fade from the elements, backed up by a 5 year limited warranty on that glass finish.

DESCRIPTION:

The "ribbed" face of these handcrafted glasses playfully diffuses the illumination. To further enhance the appearance, the inside of the glass may be softly frosted (order with FR option). While suitable for outdoor use, the design of these luminaires easily translate into interior use.

MOUNT: Flush mount stainless steel fitter

3062 series | wall sconce

DESCRIPTION:

The arched shape of this blown glass is a perfect complement to architectural features of today's buildings. The Black and Bronze finishes are opaque, while the White finish is semi-translucent for increased light output. This is an ideal companion to the larger 2433 series. While suitable for outdoor use, the design of these luminaires easily translates into interior use.

To further enhance the appearance, the inside of the glass may be softly frosted (order with FR option).
